

# Abdallah Abedraba

+3461115934 | Seville, Spain | Github | LinkedIn

## Summary

---

Software engineer who's built production systems (200k+ users), led teams; and recently focused on AI/LLM infrastructure. Comfortable as IC or lead.

**Technical stack:** Next.js, Node/Deno, TypeScript, GraphQL/REST, PostgreSQL, React

**Infrastructure:** Docker, Kubernetes, serverless, GCP/AWS

## Work Experience

---

**CTO, Co-Founder,** Producta.ai

Jun 2024 – Nov 2025

*Seville, Spain (Remote)*

- Built AI coding agent with novel multi-agent architecture replacing RAG with file summarization and layered code search; improved output quality significantly vs. competitors.
- Architected agentic pipeline: input validation layer, multi-stage code search (filename → summaries → planned AST), expert model routing for complex tasks, and automated PR generation with GitHub integration.
- Designed zero-dashboard product living entirely in Linear/GitHub; reached ProductHunt #3 and engaged 1000+ companies before pivoting based on market feedback.

**Staff Developer Relations,** Zuplo

May 2023 – Jun 2024

*Dubai, UAE (Remote)*

- Built open-source Rate-My-OpenAPI tool (400 stars, +10k reports generated); architected with durable execution workflows; improved OpenAPI linting pipeline from 3min to seconds by migrating to Vacuum (Go), contributing 10+ upstream issues.
- Led Supabase integration including 5-week technical launch, building authentication, rate limiting, and documentation features; resulted in 2x paid registrations.
- Led Go-To-Market strategy including conferences, partnerships, paid ads, and technical content.

**Product Leader,** Kubeshop

Nov 2021 – May 2023

*Dubai, UAE (Remote)*

- I led product, marketing, and engineering (10 reports), building open-source dev-tools like Testkube (Kubernetes test runner) and Kusk (API Gateway). Led technical roadmap and architecture discussions.
- Regularly proposed architectural improvements that engineering adopted; deep Kubernetes knowledge came from constant exposure to industry best practices through technical writing and customer feedback.
- Built serverless API gateway prototype addressing customer demand, matching Kusk feature parity in 1 month solo (vs. 8 months, 4-engineer team); extensive research into V8 isolates and edge architectures.

**Fullstack Developer,** GreenMobility

Oct 2019 – Nov 2021

*Copenhagen, Denmark*

- As a founding engineer, architected and built our platform from the ground up (Next.js, Node.js, Cloud Run, Cloud Pub/Sub).
- Delivered 2 consumer applications and scaled high-throughput systems (2M events per day) on serverless infrastructure.
- Shipped features daily to 200k customers and built internal portals to manage fleet of 600 cars.

**Developer Relations, Project Manager,** Google

Sept 2018 – Oct 2019

*Madrid, Spain*

- Executed regional outreach and support programs, including large-scale Google events.
- Led training in European universities with 800 students, giving workshops on Google Cloud.
- Managed relationships with 65 developer communities in Europe with thousands of members, with 1-on-1 meetings to discuss needs and funding; and helped to create 15 new communities.

## Education

---

**Universidad de Jaen** – BS Computer Science

Sept 2015 – July 2018
